For nearly three decades, methadone hydrochloride has been the primary means of treating opiate addiction. Today, about 115,000 people receive such treatment, and thousands more have benefited from it in the past. Even though methadone's effectiveness has been well established, its use remains controversial, a fact reflected by the extensive regulation of its manufacturing, labeling, distribution, and use. The Food and Drug Administration regulates the safety and effectiveness of methadone, as it does for all drugs, and the Drug Enforcement Administration regulates it as a controlled substance. However, methadone is also subjected to a unique additional tier of regulation that prescribes how and under what circumstances it may be used to treat opiate addiction. Federal Regulation of Methadone Treatment examines current Department of Health and Human Services standards for narcotic addiction treatment and the regulation of methadone treatment programs pursuant to those standards. The book includes an evaluation of the effect of federal regulations on the provision of methadone treatment services and an exploration of options for modifying the regulations to allow optimal clinical practice. The volume also includes an assessment of alternatives to the existing regulations.

Drug overdose, driven largely by overdose related to the use of opioids, is now the leading cause of unintentional injury death in the United States. The ongoing opioid crisis lies at the intersection of two public health challenges: reducing the burden of suffering from pain and containing the rising toll of the harms that can arise from the use of opioid medications. Chronic pain and opioid use disorder both represent complex human conditions affecting millions of Americans and causing untold disability and loss of function. In the context of the growing opioid problem, the U.S. Food and Drug Administration (FDA) launched an Opioids Action Plan in early 2016. As part of this plan, the FDA asked the National Academies of Sciences, Engineering, and Medicine to convene a committee to update the state of the science on pain research, care, and education and to identify actions the FDA and others can take to respond to the opioid epidemic, with a particular focus on informing FDA's development of a formal method for incorporating individual and societal considerations into its risk-benefit framework for opioid approval and monitoring.

James A. Mays is a true renaissance man: poet, scholar, popular novelist, songwriter, cardiologist, and civil leader. His individual achievements are such that he was the recipient of the George Washington Medal. Other notable recipients of this prestigious award are Barbara Jordan and the late Dr. Martin Luther King Jr. Dr. Mays has written several songs, one of which, Happy Birthday Mama, was recorded by Bill Cosby. He also co-wrote several songs with H.B. Barnum. As an author he is responsible for nine novels, including his latest Trapped, which is in preparation to become a movie. An earlier trilogy, Strivers, is being developed as a miniseries. Dr. Mays is widely recognized as the founder of community problem-solving programs such as the Adopt-A-Family endowment. He is currently involved in several campaigns promoting drug and AIDS awareness and giving assistance to the homeless. He has frequently appeared on television, featuring on shows including "The Today Show, The Phil Donahue Show, on radio, such as the Voice of America and has had articles published in LIFE, Newsweek, the Washington Post, the L.A. Times, and Ebony. Dr. Mays, who was decorated as combat physician in Vietnam, is a lone parent with four sons.
