The experiments in this book fall under seventeen topics that relate to four aspects of physical science: Movement: Properties of Solids, Liquids, and Gases; Buoyancy and Boats; Magnets; and Hot and Cold Temperature. In each section you will find teacher notes designed to provide you guidance with the learning intention, the success criteria, materials needed, a lesson outline, as well as provide some insight on what results to expect when the experiments are conducted. Suggestions for differentiation are also included so that all students can be successful in the learning environment. This book supports many of the fundamental concepts and learning outcomes from the curriculums for these provinces: Manitoba, Grade 2, Science, Cluster 2, Properties of Solids, Liquids and Gases, Cluster 3, Position & Motion; Ontario, Grade 1, Science, Understanding Structures & Mechanisms, Movement, Understanding Matter & Energy, Properties of Liquids & Solids; Saskatchewan, Grade 2, Science, Physical Science, Liquids & Solids. 96 pages.

This book offers a meso-level description of demographics, science education, and science teacher education. Representing all 13 Canadian jurisdictions, the book provides local insights that serve as the basis for exploring the Canadian system as a whole and function as a common starting point from which to identify causal relationships that may be associated with Canada's successes. The book highlights commonalities, consistencies, and distinctions across the provinces and territories in a thematic analysis of the 13 jurisdiction-specific chapters. Although the analysis indicates a network of policy and practice issues warranting further consideration, the diverse nature of Canadian science education makes simple identification of causal relationships elusive. Canada has a reputation for strong science achievement. However, there is currently limited literature on science education in Canada at the general level or in specific areas such as Canadian science curriculum or science teacher education. This book fills that gap by presenting a thorough description of science education at the provincial/territorial level, as well as a more holistic description of pressing issues for Canadian science education.

Students learn about the development of western Canada from many perspectives: Canadian government, Aboriginals, Metis and early immigrants. They understand the contributions made by different individuals and groups and learn about the conflict and changes that occurred in the 19th century.

A Guide to Choosing Your Children's Schools & Monitoring Their School Experiences is a must read for all current and prospective parents, ideally before their children reach school age. It will help them plan ahead to ensure successful educational experience for their children. The first part of the book draws attention to various factors parents should, but do not always, consider that affect their children's education. For example, what school is best for my child: Public or private; Charter, County or City school? Where you buy a home may take these choices out of your hands! The book challenges parents to use readily available information in print and on the internet, regarding school academic history, location, resources, curriculum and extra-curricular offerings, to plan ahead. It encourages parents to make deliberate choices that would position their children in the neighborhoods that would place them in the best schools. The second part of the book argues for, and illustrates, why parents should closely monitor their children's experiences from pre-school through high school, even in the best of schools. The book concludes with suggestions on various ways parents can forge effective partnerships with the school/teacher to facilitate a successful experience for their children/ward.
