Following up on the great success of The Moment It Clicks and The Hot Shoe Diaries: Big Light from Small Flashes, legendary magazine photographer Joe McNally takes us on another memorable ride with Sketching Light, another trip into the land of light--but this time running the gamut from small flash to big flash, and everywhere in between. Of course, Joe includes coverage of Nikon Speedlights, but he also covers big flash, as well as "in-between" lights as the Elinchrom Quadra. The exploration of new technology, as well as the explanation of older technology. No matter what equipment Joe uses and discusses, the most important element of Joe's instruction is that it is straightforward, complete, and honest. No secrets are held back, and the principles he talks about apply generally to the shaping and quality of light, not just to an individual model or brand of flash. He tells readers what works and what doesn't via his let's-see-what-happens approach, he shows how he sets up his shots with plentiful sketches and behind-the-scenes production shots, and he does it all with the intelligence, clarity, and wisdom that can only come from shooting in the field for 30 years for the likes of National Geographic, Time, Life, and Sports Illustrated--not to mention the wit and humor of a clearly warped (if gifted) mind.

Vols. for 1970-71 includes manufacturers' catalogs.

Park S. Nobel pioneered the coupling of cellular physical chemistry with plant physiology, providing a sound physicochemical interpretation of the laws of diffusion to a rapidly expanding field of plant physiological ecology. His classical textbook is the only one of its kind to provide an extensive array of quantitative problems and solutions in the field of plant biophysics and ecophysiology, extending from the molecular to the ecological level. In this festschrift, former graduate students and postdocs, as well as colleagues of Prof. Nobel present a series of reviews that include scales from sub-cellular to global, and topics that range from desert succulent biology to the physiology of alpine plants, encompassing basic research and applications in agronomy and conservation biology. This state-of-the-field survey provides current and useful information for professionals and graduate students, while illustrating the broad span of the influence that Nobel's career has had on modern ecophysiology.

Democracy and Enlargement in Post-Communist Europe presents the principal findings of a unique in-depth study of the birth of democracy and the market economy in fifteen post-Communist countries. Haerpter analyses and compares the information collected by the New Democracies Barometer public opinion surveys to provide an overview of the process of democratization across Central and Eastern Europe. This is an extremely valuable resource and will be useful for all those interested in the European Union, comparative politics and democracy and the Communist legacy. It contains data from Belarus, Bulgaria, Croatia, the Czech Republic, Estonia, the Federal Republic of Yugoslavia, Hungary, Latvia, Lithuania, Poland, Romania the Russian Federation, Slovakia, Slovenia and Ukraine.

First Published in 1995. Routledge is an imprint of Taylor & Francis, an informa company.

With reports from several studies showing the benefits of teaching young children about morphemes, this book is essential reading for anyone concerned with helping children to read and write. By breaking words down into chunks of meaning that can be analyzed as complete units rather than as strings of individual letters, children are better able to make sense of the often contradictory spelling and reading rules of English. As a result, their enjoyment of learning about words increases, and their literacy skills improve. Written by leading researchers for trainee teachers, practising teachers and interested parents, this highly accessible and innovative book provides sound, evidence-based advice and materials that can be used to help teach children about morphemes, and highlights the beneficial effects of this approach.

In recent years an increasing interest has been devoted to nanostructured composites. This attention is largely due to exciting possible applications ranging from new catalysts to the preparation of nanocomposites ceramics, with significant improvements in their properties. This book provides a comprehensive survey of French contributions t
