In 494 bce, the plebeians threatened to leave Rome and set up their own independent state (concilium plebis). Their object was to acquire protection

against the arbitrary acts of the Senate and consuls. During the Struggle of the Orders, the Roman constitution was modified. What the plebeians gained was the right to elect two tribunes.

From the bestselling author of *The Ascent of Money* and *The Square and the Tower* "A dazzling history of Western ideas." –The Economist "Mr. Ferguson tells his story with characteristic verve and an eye for the felicitous phrase." –Wall Street Journal "[W]ritten with vitality and verve . . . a tour de force." –Boston Globe Western civilization's rise to global dominance is the single most important historical phenomenon of the past five centuries. How did the West overtake its Eastern rivals? And has the zenith of Western power now passed? Acclaimed historian Niall Ferguson argues that beginning in the fifteenth century, the West developed six powerful new concepts, or "killer applications"—competition, science, the rule of law, modern medicine, consumerism, and the work ethic—that the Rest lacked, allowing it to surge past all other competitors. Yet now, Ferguson shows how the Rest have downloaded the killer apps the West once monopolized, while the West has literally lost faith in itself. Chronicling the rise and fall of empires alongside clashes (and fusions) of civilizations, *Civilization: The West and the Rest* recasts world history with force and wit. Boldly argued and teeming with memorable characters, this is Ferguson at his very best.

The year is 2393, and the world is almost unrecognizable. Clear warnings of climate catastrophe went ignored for decades, leading to soaring temperatures, rising sea levels, widespread drought and—finally—the disaster now known as the Great Collapse of 2093, when the disintegration of the West Antarctica Ice Sheet led to mass migration and a complete reshuffling of the global order. Writing from the Second People's Republic of China on the 300th anniversary of the Great Collapse, a senior scholar presents a gripping and deeply disturbing account of how the children of the Enlightenment—the political and economic elites of the so-called advanced industrial societies—failed to act, and so brought about the collapse of Western civilization. In this haunting, provocative work of science-based fiction, Naomi Oreskes and Eric M. Conway imagine a world devastated by climate change. Dramatizing the science in ways traditional nonfiction cannot, the book reasserts the importance of scientists and the work they do and reveals the self-serving interests of the so called "carbon combustion complex" that have turned the practice of science into political fodder. Based on sound scholarship and yet unafraid to speak boldly, this book provides a welcome moment of clarity amid the cacophony of climate change literature.

This lively text offers a brief, readable description of our common Western heritage after Europe expanded into the rest of the world during the Renaissance, then through revolutions that have created today's technological global society. Providing a tightly focused narrative and interpretive

structure, Brian A. Pavlac covers the basic historical information that all educated adults should know. His joined terms “supremacies and diversities” develop major themes of conflict and creativity throughout history. “Supremacies” centers on the use of power to dominate societies, ranging from warfare to ideologies. Supremacy seeks stability, order, and incorporation. “Diversities” encompasses the creative impulse that produces new ideas, as well as the efforts of groups of people to define themselves as “different.” Diversity creates change, opportunity, and individuality. These themes of historical tension and change—whether applied to political, economic, technological, social, or cultural trends—offer a bridging explanatory organization. The text is also informed by five topical themes: technological innovation, migration and conquest, political and economic decision making, church and state, and disputes about the meaning of life. Throughout, judicious “basic principles” present summaries of historical realities and primary source projects offer students the chance to evaluate differing points of view about the past. Written with flair, this easily accessible yet deeply knowledgeable text provides all the essentials for courses on Western Civilization.

Western civilization and world history are often seen as different, or even mutually exclusive, routes into historical studies. This volume shows that they can be successfully linked, providing a tool to see each subject in the context of the other, identifying influences and connections. Western Civilization in World History takes up the recent debates about the merits of the well-established 'Western civ' approach versus the newer field of world history. Peter N. Stearns outlines key aspects of Western civilization - often assumed rather than analyzed - and reviews them in a global context.
